

THE UNIQUE TOOL FOR COLLABORATIVE DESIGN OF COMPLEX SYSTEM

Speed up your project

Based on a relevant and valuable set of parameters, identify key design drivers quickly and predict behaviours when introducing changes

Increase Product Value

Easily explore the correct design space to select optimal solutions closing on all criteria simultaneously: performance, safety, cost, compliance

Embrace Complexity

Manage complex situations while helped by quick analysis of numerous and competing information

INDUSTRY LEADER

DPS is a player in digital continuity recognized for its know-how integrating simulation within the design process of the design of industrial products.

We have a solid expertise in CAD/CAE integration, process automation, system modeling & simulation and design optimization.

CUSTOMER LOYALTY

Our engineers are experienced at both design and simulation, providing our customers with a unique set of skills to succeed in their developments.

PSA, Renault, Airbus, Ford, Honda, Safran have been trusting us for the past years.

CONTINUOUS INNOVATION

R&D is key to our strategy and contributes greatly to the drive to propose innovative solutions to our customers.

For the past 10 years 'Le Lab' at DPS has been exploring new scientific and technological ideas in fields such as Industry 4.0, data mining, data analytics, I.A. ...

STRONG OFFER IN SERVICE

DPS offers services including consulting, technical support, training, software customization and edition ...

With a strong background in mechanical engineering, our teams are experienced in domains such as stress, electrical, electronics, firmware/software, thermal & fluid dynamics, CEM modeling and optimization.

AN INDUSTRIAL APPLICATION: THE MORE ELECTRICAL AIRCRAFT (MEA)

HETEROGENEOUS TOOLS:

- Design & Manufacturing
- System modeling & Simulation
- Mechanical & Electrical

MULTIPLE DISCIPLINES

MULTIPLE FUNCTIONS

CAPTURE KEY DATA

Aero-Fluid Dynamics

- Drag
- Lift

Battery

- Total Energy (Autonomy)
- Energy Density

Design

- Wing Span
- Fuselage Length
- Wing Surface

Electrical Engine

- Fan profile, thrust
- Engine Efficiency
- Engine Power

Flight Mission

- Speed
- PAX Number
- Altitude
- Flight Duration

APPLY CONCURRENT ENGINEERING

- Support consistency checks
- Take decisions and track rationales
- Propagate choices and assess impact

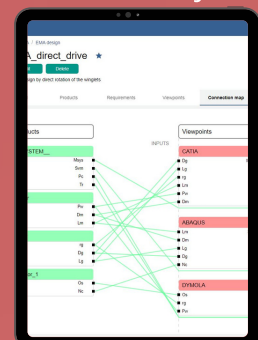

Make decisions and go to production faster

Find optimal trade-off

Compare alternatives against value/objectives

Analyse and assess each alternative
